

FULL-CONTENT INTERNET DATA CAPTURE

- ▶ **Take Action Against Internet Misuse**
- ▶ **Improve Productivity and Morale**
- ▶ **Increase Bandwidth Efficiency**
- ▶ **Reduce Costs**

WebSpy Sentinel 3.1 is the most comprehensive data capturing software available to monitor and track Internet usage within an organization. Flexible installation points plus the ability to capture full content or simply generate a log file means that any size organization can better understand and monitor Internet usage.

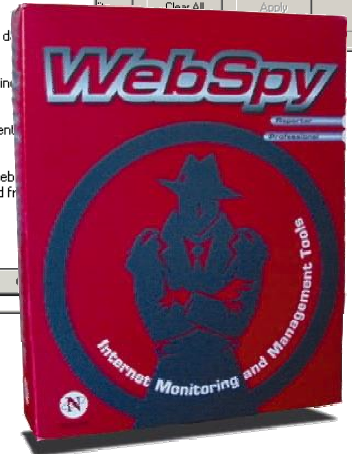

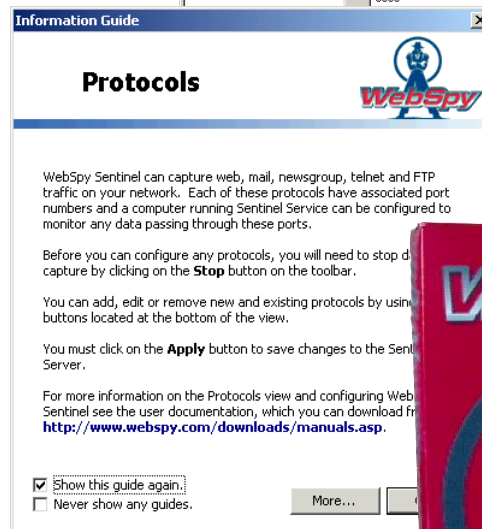

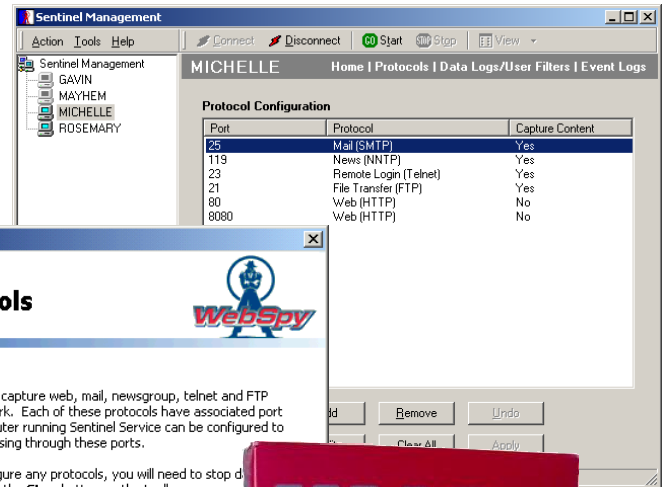

Used in conjunction with WebSpy Analyzer or Live, you can capture email and web pages visited, inspect the content and attachments for appropriate web usage and accurately categorize each site visited.

KEY FEATURES

- ▶ Captures multiple protocols including SMTP, HTTP, FTP, NNTP and Telnet.
- ▶ Full content capture including web pages, email attachments/text and newsgroup discussions.
- ▶ Creates log files recording low-level data on web pages visited, emails sent/received, newsgroup information etc.
- ▶ A two-component system allows multiple installations of the Server Service application depending on network configuration to ensure ALL Internet traffic is being captured while the management console offers rapid and real-time configuration ability.
- ▶ Complete integration with WebSpy Analyzer and Live for customized reporting and alerting on captured data.
- ▶ Enhanced speed and stability enabled through log/XML file storage functionality.
- ▶ Username resolution on Windows® NT and 2000 machines enables accurate monitoring of employees on DHCP networks.
- ▶ Comprehensive documentation and on-line help provides quick and easy installation and configuration.

RECOMMENDED SYSTEM REQUIREMENTS

- ▶ PII 300 ▶ 64 MB RAM ▶ Ethernet network card ▶ Windows® XP, 2000, NT4, 98 or ME
- ▶ 6 MB of free hard drive space. As data is captured, extra disk space will be required
