

[Desktop Solution]

ZixMail provides a simple solution to the increasingly critical problem of email security and privacy on the Internet. ZixMail is a desktop level solution that provides point-to-point secure email delivery for individuals and organizations that require a high level of security. It's a simple, easy-to-use solution that allows users to encrypt, decrypt and send private and secure emails and attachments to anyone, ZixCorp user and non-user alike, with a single click. ZixMail integrates with today's most popular email systems covering over 98% of the marketplace. It's an everyday business tool, as well as a natural extension to a company's corporate security policy.

FEATURES

Easy to Use

- ZixMail is compatible with all MIME-compliant email systems, including Microsoft Outlook®, Lotus Notes®, AOL®, Yahoo!® Mail and MSN Hotmail®
- Fully integrated versions are available for Outlook and Notes
- ZixMail provides automatic retrieval and distribution of public encryption keys from the ZixCorp Secure Center

Easy to manage

- Outgoing ZixMail messages can be routed through company SMTP servers or the ZixCorp mail relay
- ZixMail requires minimal IT support with no hardware to install and no public keys to manage or exchange

Flexible

- Built on ZixCorp's Best Method of Delivery™, ZixMail enables users to send secure e-messages to anyone, even if the recipient is not a ZixCorp services subscriber
- ZixMail automatically selects the most secure way to send documents based on the capabilities of the recipient
- ZixMail is so easy to use, it can be downloaded and completely installed within minutes

Integrated

- Works seamlessly with all other offerings in the ZixCorp Suite of Solutions

E-Messaging

Send-to-Anyone

[Secure Content Delivery]

ADVANTAGES

- **Compliant to Existing Systems**

Present Email Systems Leveraged – ZixMail is available as a stand-alone application or integrated seamlessly with your current email desktop systems.

- **Rapid Deployment**

Installs in Minutes – ZixMail can be deployed administratively for large-scale installations or downloaded by individuals.

- **Privacy and Integrity**

Intranet and Internet Confidentiality – ZixMail is a point-to-point, desktop encryption service that ensures that a message arrives unaltered and unable to be opened by anyone but the intended recipient.

- **Authentication and Non-Repudiation**

Certifying Messages – With third party time stamping and strong authentication, all ZixMail messages can provide irrefutable proof of delivery and receipt.

ABOUT ZIXCORP

ZixCorp is a global provider of secure e-messaging services, providing innovative, cost-effective, and easy-to-deploy solutions that ensure the highest levels of security for corporate email and other electronic messages. ZixCorp's security suite enables organizations to leverage email as a mission-critical application that can be used efficiently and securely for even the most sensitive electronic messages and content.
