

[Server-based Solution]

ZixVPM – ZixCorp’s Virtual Private Messenger – is a server-based enterprise solution for organizations that require a high level of security and encryption for inbound and outbound email communications.

ZixVPM provides a secure e-messaging gateway without the need to create, deploy and manage end-user encryption keys and software.

ZixVPM is designed to elevate decision making for email security to the corporate policy level, while providing a secure and private channel for email communications between companies, their customers and business partners.

FEATURES

Flexible

- Corporate security policies can be set for the entire enterprise domain down to individual departments or persons
- Multiple policies can be defined according to the various levels of policy controls
- Branding policies can be created with the same flexibility as security policies
- Through the ZixSelect optional feature, an end user can flag a specific message for encryption regardless of defined policies

Easy to manage

- Administrative Console provides a centralized management tool for ZixVPM’s policies, branding and reporting capabilities
- ZixVPM is a server-level gateway – configuration and installation is simple and easy, providing “instant on” for the entire corporation

- There is no desktop software to install or manage, and thus no training required for the users in the organization
- Automated key retrieval and distribution means zero key management for the administrator

Easy to use

- Works seamlessly with your existing network infrastructure, including email systems, virus scanning, and content-filtering programs
- ZixVPM uses ZixCorp’s Best Method of Delivery™ to automatically determine the most secure method of delivery available for transmitting external email messages
- ZixVPM provides automatic retrieval and distribution of public encryption keys from the ZixCorp Secure Center

Integrated

- Works seamlessly with all other offerings in the ZixCorp Suite of Solutions

KEY BENEFITS

- Reporting Capabilities
- Strong Encryption

SYSTEM REQUIREMENTS

- In-house mail server
- Internet connectivity
- Access to DNS

E-Messaging

Send-to-Anyone

[Secure Content Delivery]

ADVANTAGES

- **Adaptable**

Current IT Investments and Environments Undisturbed – ZixVPM interoperates seamlessly with existing corporate platforms of antivirus, content filtering, and email system applications regardless of brand.

- **Robust**

Ubiquitous Policy Enforcement – ZixVPM has the capability and capacity to manage all inbound and outbound email traffic.

- **Transparent**

Transparent to End Users – ZixVPM is a gateway solution providing the encryption and decryption behind the scenes, making it completely transparent to end users.

- **Instant-On**

Rapid Deployment – Unlike self-integration, ZixVPM permits complete integration and installation of the entire network in a matter of hours.

ABOUT ZIXCORP

ZixCorp is a global provider of secure e-messaging services, providing innovative, cost-effective, and easy-to-deploy solutions that ensure the highest levels of security for corporate email and other electronic messages. ZixCorp's security suite enables organizations to leverage email as a mission-critical application that can be used efficiently and securely for even the most sensitive electronic messages and content.
